Yantra's PureECommerce Platform is highlighted in a discussion of inventory management and order fulfillment choices for e-commerce companies. Various users, vendor spokespeople, and experts describe how optimized order fulfillment and logistics can enhance e-commerce customer service and revenues. For instance, Papa John International has over 2,000 pizza restaurants, but UPS Logistics delivers cheese, dough, and tomato paste to the stores. Back-end partnering agreements among vendors and delivery companies show how some companies extend enterprises to meet the demands of e-business fulfillment. Shipping companies currently review their clients' business plans and attune their inventory levels. Distribution warehouses store products and also host activities previously managed by manufacturers. Information technologies also enhance inventory level management in distributed warehouses and track products as they are transported. To keep inventories at their optimum and most cost-effective levels while still maintaining the ability to meet orders, Toysmart built an order fulfillment center. Its system is based on PureCommerce order fulfillment software, which allows **handheld** devices to **scan barcodes** and transport inventory data via radio frequency (RF). However, other industries, including telecommunications and computers, where inventory becomes outdated quickly, need to have goods moved quickly; many of these vendors use Airborne Express, FedEx, and UPS, whose tracking systems monitor transportation of goods.

Agents, which find the best deals available on the Internet from online retailers, tell shoppers prices, features, and shipping in just seconds. Shopping bots can be even more useful if they learn the behavior of each consumer and can be programmed to hunt the Internet for desired items even when the consumer is not logged on. For e-commerce sites, such agents mean that some sites will have to compete more effectively by lowering prices. However, shopping agents are more of a danger to physical stores, which have higher sales costs. Bots could encourage customers to buy from the Web to the extent that they will spend less time in retail establishments. An example of a site that provides access to shopping bots is www.botspot.com, which lists over 30 shopping agents, including mysimon.com, acses.com, and roboshopper.com. Such sites as Compare.net add to the power of shopping bots with an online buyers' guide from specific product categories. However, intelligent shopping agents do not only find bargains. A new group of agents will assist in finishing transactions while staying inside a stated budget. Andersen Consulting has developed the Pocket Bargain Finder, a portable phone with a **wireless** modem and a stylus for **scanning barcodes**. It finds the lowest possible price for an item over the Internet in real time, and can be used in retail establishments to compare prices or plan a shopping trip.

Mustek successfully expands into DVD production

TAIWAN: MUSTEK EXPECTS NT\$10 BILLION IN REVENUE

China Economic News (AMH) 18 Mar 1998

Language: ENGLISH

Mustek System Inc. of Taiwan expects to earn a revenue of NT\$10 billion in 1998. 90% of the revenue is expected to come from the sales of **scanner products** and 10% from **digital** cameras, DVDs, digital photo printers, and LCD projects and other products. It has extended its product lines to include DVDs as the company has newly developed prototypes of DVD players and DVD ROMs, a company official said. In May 1998, it will start producing DVD products in a large volume, for sales in July 1998. The company is now making effort in setting up co-operation with Taiwan electronics products makers for DVD OEM or ODM business. In addition, it will tap the markets of the U.S. and Europe for its DVD ROM products. The company is aiming at producing 20,000 digital cameras per month, with a sales volume of 250,000 digital cameras in 1998. *

A charge-coupled device (CCD) is a light-responsive integrated circuit employed in **scanners**, **barcode** readers, **digital** cameras, and **digital** video cameras. CCDs **store** electrical charges, created when photons strike semiconducting material. With each CCD representing a single pixel, the technology can offer sharp imaging and resolutions that do not degrade. In fact, many digital cameras offer sensors with ranges of 6 million pixels. CCD charges are transferred through a number of gates, resulting in the transformation of analog images to digital form. This process is termed 'coupling.' Since CCDs are sensitive to light intensity, not color, three CCD imaging arrays often are employed. The arrays represent three primary colors. The information from these arrays are merged to create color images. However, arrays can vary. For example, Canon's digital cameras reference cyan, yellow, green, and magenta instead of red, green, and blue. CCDs were invented in 1969 by Bell Labs' George Smith and Willard Boyle. The technology is used in everything from television cameras to computer scanners. Among negatives, CCDs sometimes distort images. Also, CCD technology is expensive.

Voxware's VoiceLogistics and VoxView, a Web-based management solution that provides monitoring and reporting for speech-based systems, are highlighted in a discussion of the increasing use of speech-based systems by retailers. For instance, Somerfield, a grocer in the United Kingdom, is deploying speech recognition technology in its distribution operations. Neil Rixon, logistics development director for Somerfield, says benefits include better productivity and accuracy that will improve profitability. Combined advantages include better order accuracy and increased visibility to distributed operations, which will greatly improve service levels to stores. The Voxware VoiceLogistics system will be deployed for picking operations in some areas, and also for put-to-store operations with catchweights. Speech-based logistics systems generally include a wireless, wearable device with a headset, through which workers direct picking packing or putaway processes. Workers say serial numbers, quantities, and queries out loud, rather than scanning barcodes. Speech-based logistics tools are often used in areas where workers need both hands free for other work. The market for ruggedized wearable computers, according to one estimate, should have 40 percent growth compounded annually, reaching a value of \$258 million in 2005. Vocollect, a competitor to Voxware, says sales increased in 2001 at a 33 percent rate, which represented the fifth straight year of percentage increases of that size or larger.

Wireless point-of-sale (POS) systems used by Home Depot, Kmart, Crate & Barrel, Hannaford Brothers, Best Buy, and Wal-Mart allow the retailers to track performance and speed customer checkout. **Wireless** POS allows associates to move to the lines and scan orders in while customers wait, so they can pay immediately upon reaching a register. Other abilities are also being added to POS devices, including self-service checkout and **wireless** terminals. They can process transactions at shopping kiosks located in a mall. **Wireless** POS generally runs over an 802.11 network, but evolving Bluetooth transmission also permits other transport modes. Advanced **wireless** technologies allow multiple devices that are fitted out with network cards or transceivers to send and receive data in the network. Therefore, customers, employees, and just about all other users of **handheld** PCs can access a database or POS system and use it to check prices, get product information, **scan items**, and perform other POS functions. Home Depot wants to expand **wireless** to all registers to allow performance monitoring and overruling correction without going to the register. Kmart has **wireless** POS, which is in all 2,100 or more stores, speeds checkout and allows associates to help shoppers in all parts of the store .

WuliWeb, which recently acquired AirClic, a provider of technology that allows **wireless** devices to **scan barcodes**, will soon be able to meet the needs of publishers and their advertisers, based on a robust, worldwide technology standard developed by AirClic, says James Grady, CEO of WuliWeb. WuliWeb's technology allows users to **save** information from the Internet, newspapers, magazines, or self-generated content to a personal online library. With WuliWeb, users will be able to select information they need and **store** it online by entering WuliCodes from the keyboard, phone, **personal digital assistant (PDA)**, or other **mobile** devices to an online account. WuliWeb becomes the content manager by filing and storing the information, which is accessible when needed. Currently, people get

some content that they need at no cost on the Internet, but they still like to read paper publications while sitting comfortably in a chair. Online reading is physically exhausting after any lengthy period, and print is also **portable**. WuliWeb WuliCodes are five digit numbers that are placed at the end of printed articles or in magazine ads. When that code is entered, it is stored in a personal online library, and the user need not search for it again. WuliWeb also automatically culls keywords from saved articles and creates an index. WuliWeb is working with publishers, including CMP Media, which publishes 42 magazines read by 6 million people, to launch the product.

From paper to computer: the world of scanners -- In service: Tech 101

Branzburg, Jeffrey

Technology & Learning , August 1, 1999 , v20 n1 p41, 1 Page(s)

ISSN: 1053-6728

Languages: English

Document Type: Articles, News & Columns

Geographic Location: United States

Examines the process involved in converting images on paper to computer images through the use of a scanner. Indicates that a scanner is a device connected to a computer that can read the patterns of light and dark on a piece of paper. Says that the paper can contain text, photographs, or graphics, and that the scanner can **store** the pattern as **digital** information in a computer file. Reveals that the price of scanners has dropped in recent years from around \$1,000 for a low-end model to as little as \$49. Presents examples of classroom uses: scanning student artwork in order to compile a class project or scanning old maps, newspaper items, and photos of historical sites for a history project. Adds that any **scanned items** can then be re-sized, captioned, and supplemented with sound and motion for a multimedia show or school Web site. Comments that now may be the time to lobby for a scanner in the classroom. Includes one illustration. (af)

TELEPHONE: (604) 451-7878

RECORD TYPE: Directory

CONTACT: Sales Department

STOCKTRAKKER 2.1 from Bar Code Applications is a barcode data collection system for warehouses and distributors. It tracks items throughout the process of receiving, storing, shipping, and inventory. Its benefits include reduced costs, improved reporting, and elimination of human error associated with manual data entry. STOCKTRAKKER enables users to scan the barcodes of incoming items using a **portable** scanner or, optionally, a scanner attached to a PC. Data gathered by a **portable** device can be easily **uploaded** to the PC within minutes. After the user enters the barcodes of all incoming items, STOCKTRAKKER automatically updates the inventory file and creates a file for exporting the data to the accounting or main system. When the items are stored, their physical location can be scanned and included in the inventory file. STOCKTRAKKER guarantees accuracy in shipping items by automatically checking the **scanned barcode** of an item against the order data stored within the **portable** scanner or, optionally, from a list that details the order. It maintains inventory by serial number and enables users to search for items and view their order status.

Stevens Creek Software offers On Hand, a data collection and barcode scanning tool for **palmtop** computer users. It can be used along with a **downloaded** catalog to identify **scanned items**, or without a catalog, to simply collect **scanned barcodes**. On Hand includes IntelliScroll (TM), which enables users to select items from a catalog without a scanner. In addition to these inventory tasks, On Hand can collect information such as location, model, serial number, or asset tag number. All collected data can easily be transported to the desktop or printed directly from the **handheld** device with PalmPrint software.

Title: Sweet success at Dunhills

Author(s): Liston, G.

Journal: ID Systems European Edition vol.3, no.4 p.22, 25-6, 50

Publication Date: Sept. 1995 Country of Publication: USA

CODEN: ISEEEE ISSN: 1081-275X

Language: English Document Type: Journal Paper (JP)

Treatment: Applications (A); Practical (P)

Abstract: A venerable sweets manufacturer users bar code to guarantee product quality. Product specifications are stored on the company's Novell network and **downloaded** to Radix FW60 **handheld** computers each morning. The Radix computers are equipped with Spectra-Physics SP400 bar code **scanners**. **Product** specification files for both raw materials and finished products combined require 8 MB on the network server, but when compressed and specific information is extracted, the **downloaded** files are only 0.5 MB. The program on the **handheld** computer reads information from the specifications and, depending on parameters, asks certain questions. For example, if the field "Check Weight" contains Y, then the system will validate the weight printed on a bag. (0 Refs)

PRODUCT NAMES: ViaWare WMS (432059)

TITLE: Web-Enabled, Wireless , and Wonderful: Warehouse Management Systems

AUTHOR: Malone, Bridget

SOURCE: Electronic Commerce World, v10 n8 p40(3) Aug 2000

ISSN: 1092-0366

HOME PAGE: <http://www.ecomworld.com>

RECORD TYPE: Review

REVIEW TYPE: Product Analysis

GRADE: Product Analysis, No Rating

Provia Software's VIAWARE WMS is used by Ryder System, a logistics and transportation provider, to deploy Web-enabled, **wireless**, efficient warehouse management. Warehouses, which are now distribution centers rather than inventory storage facilities, could at some point become unnecessary. With new technologies and software running warehouses, the actual bricks-and-mortar warehouse could become obsolete. About 3,000 WMS vendors operate in the market. The use of **wireless handheld** devices in combination with **handheld** barcode scanners and Internet transmission can significantly streamline many activities. A WMS coordinates the stock on a warehouse's **receiving** dock with outbound **orders**, so that put-away and pick activities are unnecessary and cross-docking can replace those tasks. Cross-docking is growing in popularity, says Chris Newton, an industry analyst for supply chain management (SCM), who also explains that companies using warehouse management systems do so to 'make their processes fluid.' Topics covered include scanning the Internet; Symbol Technologies, which uses barcodes and lasers to **scan items** and creates a data file that moves around with the goods; and VIAWARE, which has been expanded to include a transportation management system, order management, and yard management.

Pace hands grocers a TV solution

UK: PACE DEVELOPS HOME SHOPPING DEVICE

Retail Week (RWK) 07 Jan 2000 p.8

Language: ENGLISH

Pace Micro Technology has developed a new **handheld** device that allows home shopping through **digital** television set-top boxes. The device is called the Shopping Mate and it communicates with a set-top box via radio frequencies. The set-top box then connects to the supermarket and orders the products for the customer. The Shopping Mate can also be used in

supermarkets to **scan** **items** that can then be added to future shopping lists from its databank. Pace Micro is said to have had a number of enquiries from supermarkets and retailers about the Shopping Mate, although has not yet **received** any **orders** .

Detailed Description

... been accomplished by systems which scan an entire so
called log file to reconstruct the **up** -to-date state of the system
before the crash. Log files are routinely utilized with...in question.
However, there may
indeed be subsequent log records thereafter which need to be
scanned . If this is the case, then the system contacts the
participant about the transaction state...the
reservation table and determines a new file pointer position.

Thus, the entire section is **scanned** to update the state of
reservation table 140, with the determination of the new file...

Abstract (Basic): US 20040123063 A1

NOVELTY - An application specific template indicating intended use of storage media is selected by an user or software module using storage allocation service. A set of storage media is configured using the selected template, to provide storage media to user.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (1) storage media usage specification system; and
- (2) computer program product storage media usage specification system.

USE - For specify usage of logical storage media such as optical disk such as compact disk-read only memory (CD-ROM), CD-R, magnetic disk, tape and hard disk of computer for business application, **personal digital assistant (PDA), document scanner , barcode reader, digital cellular telephone, digital camera.**

ADVANTAGE - Storage media corresponding to user requirement is provided and implemented without receiving user instruction.

DESCRIPTION OF DRAWING(S) - The figure shows the flowchart of storage media configuration determination process.

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
KR 2004016431	A	1	G06F-019/00	

Abstract (Basic): KR 2004016431 A

NOVELTY - A system and a method for managing the food garbage gathering using an electronic display tool are provided to construct an effective gathering management system using a 2-dimensional barcode, an RFID(Radio Frequency IDentification), and a scanner, to manage a garbage charge of an apartment by each household, and to offer an information searching service regardless of location.

DETAILED DESCRIPTION - A sticker maker terminal(100) makes/delivers the stickers of a quantity requested from a computation center server, and informs a district office(200) and a gathering company(410) of the barcode information. The computation center server requests the sticker maker terminal to make/deliver the sticker, orders the gathering company to print the barcode to the sticker, and registers the information of a discharger(600). A computation center(300) collects and collectively manages the data by connecting to the computation center server, the gathering company server, and a discharger's terminal. The gathering company checks the gathering sticker while gathering the food garbage through the barcode by using a PDA, and transmits the scanned barcode data to the computation center.

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
KR 2004001772	A	1	G06F-017/60	

Abstract (Basic): KR 2004001772 A

NOVELTY - A method for the EC(Electric Commerce) using a mobile communication terminal embedded with a bar code reader and a recording

medium storing the same are provided to simply satisfy a buying desire of a customer by simultaneously performing goods purchase and settlement only if the customer scans a bar code included in the goods with the mobile communication terminal.

DETAILED DESCRIPTION - The bar code information of the **scanned goods** is received from the **mobile** communication terminal(115). A goods code is extracted from the bar code information. The goods information is searched by referring to the goods code(120). The searched goods information is transmitted to the mobile communication terminal(125). The confirmation information and the settlement information are received from the mobile communication terminal(130). It is judged that the settlement information is valid. If the settlement information is valid, the goods purchase is approved(135).

AU 2002323202 A1 G06F-000/00 Based on patent WO 200317058

Abstract (Basic): WO 200317058 A2

NOVELTY - System comprises a server accessing a database storing lens product information, the products having packages with readable indices. A device at each location scans the indices dispensed to customers to obtain inventory tracking information and this is passed to the server. A tracking mechanism updates the quantities of lens products. An order entry infrastructure provides lens product ordering and fulfilment functions for the various locations.

DETAILED DESCRIPTION - There are INDEPENDENT CLAIMS for:

(1) A method of dynamically tracking an inventory of lens products

(2) A computer program for dynamically tracking an inventory of lens products

USE - System is for simplifying the tracking and control of contact lenses maintained in an inventory at the office of an eyecare professional, and automating the lens product ordering process.

ADVANTAGE - System streamlines the customer service order entry process by automatically generating orders, gives a low inventory warning, optimises inventory levels, uses a **handheld PDA** to **scan barcodes** and interfaces with existing telecommunications infrastructures.

DESCRIPTION OF DRAWING(S) - The figure shows a system architecture underlying the dynamic inventory and tracking and management system.

Abstract (Basic): EP 676708 A

The information loading system includes one data base which contains item information. A second data base contains identification information for each of several shelf displays. A computer terminal matches the item information to the identification information. The two data bases are at different locations.

One computer terminal down-loads the item information and passes it to a second terminal where it is matched to identification information.

A **hand held** scanner is used for **scanning items** so as to obtain item information for storage in the data base.

USE/ADVANTAGE - In shelf display and in conjunction with bar code reader. Allows simple variation of prices and easy initialisation of shelf displays.

Abstract (Basic): US 6607125 B1

NOVELTY - A product tag is scanned to obtain product information without deactivating a security tag when the mode switch of scanner is in scan mode. The product tag is scanned to concurrently obtain product information and deactivate the security tag when the mode switch is in purchase mode. The activation/deactivation state of the security tag is determined by operating the security switch of the scanner.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for handheld merchandise scanner.

USE - For operating handheld merchandise scanner (claimed) used in retail store .

ADVANTAGE - Since the product tag is scanned is scan mode to obtain the product information without deactivating the security tag, the need for checking the security tag by the store personal is avoided.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the remote scanning device.

NOVELTY - An information reader has a light source (20), a scanning beam generator, several pattern mirrors (25-29) and a photodetector (31) which are configured symmetrically with a shaft in the inner side of a head portion (3). DETAILED DESCRIPTION - The light source (20) performs emission of light beam. A scanning beam generator performs scanning of light beams and generates a scanning beam which is reflected in different directions by several pattern mirrors (25- 29). A window (2) emits the scanning beam from the mirrors (25- 29). A condensing mirror (30) condenses light returned through the window. The condensed light is received by a photodetector (31) which detects its strength.

USE - E.g. **hand - held** type barcode scanner used for **scanning barcode** in point-of-sale operation in department **store** , supermarket by passing light.

ADVANTAGE - Offers simple, small sized scanner with sufficient symmetry. DESCRIPTION OF DRAWING(S) - The figure shows front elevation of optical system of hand-held type barcode scanner. (2) Window; (3) Head portion; (20) Light source; (25-29) Pattern mirrors; (30) Condensing mirror; (31) Photodetector.

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
US 6779722	B1		9	G06K-015/00	

Abstract (Basic): US 6779722 B1

NOVELTY - The system has an authorized personnel identifier for identifying authorized personnel scanning an item. The identifier confirms the authorization of identified person through a database query. A provisional weight multiplier operatively coupled to the authorized personnel identifier multiplies a contribution of a sensed weight for the **scanned item** to a new weight computation.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a method for multiplying the contribution of provisional weight data for items scanned by authorized personnel to the computation of a new weight.

USE - Used for multiplying the contribution of provisional weight data for items, scanned by authorized personnel, at self-checkout terminal in grocery and retail stores.

ADVANTAGE - The system utilizes the more trustworthy data obtained by the **store** employee to confirm the new data value without significantly jeopardizing the integrity of the new data value computation. The system quickly collects the historical weight data required for computing an accurate weight for an item identifier.

DESCRIPTION OF DRAWING(S) - The drawing shows a flowchart of an exemplary method for collecting and weighting provisional weights for the computation of new weight for items scanned by the station.

KR 2004025232	A		1 G06F-017/60	

Abstract (Basic): KR 2004025232 A

NOVELTY - A financial business service using a mobile communication terminal is provided to scan 1D(Dimension) or 2D barcode on a mono or a color screen in order to reduce security risk and process a high price settlement with the mobile communication terminal.

DETAILED DESCRIPTION - A user requests an electronic settlement service using the mobile communication terminal(110). A mobile communication company confirms user certification and member shop(120). The mobile communication company generates/transmits the encrypted 2D barcode of the information for the electronic settlement to the mobile communication terminal(130). The barcode displayed on the mobile communication terminal is inputted through a barcode scanner of the member store (140). The price settlement, a credit loan, and a cash service are provided to the user by using the scanned barcode (150). The user inquires the transaction particulars, and the mobile communication company sends the use particulars and a bill(160).

Abstract (Basic): US 20030200152 A1

NOVELTY - The data associated with an item is acquired, according to bar code data scanned by a wireless device. The search data for searching similar items, is generated based on acquired data. The data related to similar items, is acquired using the generated search data. The acquired data of items, are transmitted to the wireless device.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (1) information comparing method; and
- (2) sellers locating method.

USE - For online shopping using portable wireless communication devices such as personal digital assistants, personal computers, cellular phone communicating through wireless communication network such as cellular network, local area network (LAN), wireless area network (WAN), digital wireless network.

ADVANTAGE - The user is enabled to purchase the **scanned item** or one of similar item at **store** which is in the remote place, using the wireless communication device.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of a wireless shopping system.

wireless shopping system (100)

Abstract (Basic): US 20020095343 A1

NOVELTY - A scanner (28) scans the products selected by a consumer.
A video monitor displays the cost of the **scanned products** which are
dispensed into a container by a dispenser.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the
following:

- (1) Automatic purchasing device;
- (2) Point of purchase-device;
- (3) Consumable and non-consumable product dispensing device;
- (4) Automatic checkout device operation method;
- (5) Consumable and non-consumable product provision method;
- (6) Revenue generation method;
- (7) Product purchasing method;
- (8) Point of purchase product provision system;
- (9) Point of purchase product dispensing method; and
- (10) Point of purchase device operation method.

USE - For automatic checkout of point of purchase products such as
confectionery items e.g. gum, candy and soft drinks, non-consumable
items e.g. magazine, newspaper, movie ticket, airplane ticket,
periodicals, video tape, CD, DVD, cigarette lighter, battery, key
chain, writing instrument, film, toiletry and toy in gas station,
grocery **store**, fast food restaurant, movie theater, airport and super
market.

ADVANTAGE - Facilitates the point of purchase products to be
automatically dispensed as the consumer purchases other retail items.
Enables the consumer to make a single payment for the point of purchase
products and the retail items.

DESCRIPTION OF DRAWING(S) - The figure shows the schematic view of
the stand alone point of purchase device.

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
US 20020040341	A1		9	G06F-017/60	
US 6679421	B2			G06F-017/00	

Abstract (Basic): US 20020040341 A1

NOVELTY - A processor (340) transfers the customer information and commodity information which is obtained from **scanned barcoded** data on cellular phone to the processor (320). The processor (320) calculates the total amount of money to be paid by the customer and transfers calculated result to a credit card company. The processor (350) processes the information received from the processor (320) and analyses the commodity purchase information and the commodity preference.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for customer management method.

USE - Customer management system using liquid crystal display (LCD) barcode displayed on mobile terminal such as cellular phone, personal digital assistant (PDA) and pager, and used with point-of-sales (POS) system and electronic purchase system in theater, concert hall, playing ground and other places employing tickets, and in department **store**, fast food restaurant beauty salon, large scale supermarket.

ADVANTAGE - The use of barcodes enable low cost implementation of the system which rapidly and accurately acquires purchase details and propensities of the customer by linking with POS system effectively. The use of cellular phone eliminates the need for carrying customer management cards or coupons and enables the system to rapidly transfer the desired information to customers at any place. Effective marketing is done based on the acquired purchase information. Since the system manages the customers during both inline and offline purchase, the efficiency of the system is increased.

DESCRIPTION OF DRAWING(S) - The figure shows a block diagram of the customer management system.

Abstract (Basic): EP 1011061 A2

NOVELTY - The computer system includes a memory (40) for storing a current stock list based on product codes. An electronic version of a **store** purchase receipt, including product codes for the items purchased, is sent from the **store** to the customer's home computer where it is used to update the current stock list (41) by addition of products purchased. Items are deleted from the current stock list as they are disposed of by the customer, in response to an electronic indication of the corresponding product codes produced, for example, by **scanning product** packaging with a bar code scanner. When the customer initiates a home stock check, the current stock list is compared with a predetermined stock level and an indication of which items need replacement is produced.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for a method of stock control and computer program.

USE - For stock control, in the home, of everyday household items.

ADVANTAGE - Provides rapid and convenient way of updating inventory of products, enabling rapid generation of a shopping list of items to be replaced.

DESCRIPTION OF DRAWING(S) - The figure shows a block diagram of internal computer program and memory components of stock control computer system.

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
JP 11259570	A	30	G06F-017/60	

Abstract (Basic): JP 11259570 A

NOVELTY - Interaction of objective component is done within the recognized **scanning**. **Goods** service transfer action and service behavior are changed according to set action rule with reference to interaction of objective component. According to the action result, data regarding objective area is changed and mutual data is updated. DETAILED DESCRIPTION - The objective space with several cells is created. Several objective components for simulating goods service transfer action and service behavior are setup in the created objective space. The interaction of predefined objective component is repeated for predefined time.

USE - For management simulation in management decision support system in retail **store**, restaurant, building material supply industry.

ADVANTAGE - Goods service transfer action and service action are simulated according to simulated selling using simple algorithm thereby this improves service efficiency. The data of an objective components interaction produced from action result is updated repeatedly and this helps in reflecting next time behavior of visitor within the sphere of quotient. DESCRIPTION OF DRAWING(S) - The figure shows the flow chart of algorithm of entire simulation in a **store** with management simulation procedure.

Abstract (Basic): GB 2336925 A

NOVELTY - The **store** computer (50) communicates with a mobile terminal (5) to find a customers present location and the tell the customer the location of desired items from a shopping list or recommended replenishment list read by the mobile terminal from an IC card.

DETAILED DESCRIPTION - When a customer scans an item (15) the location of the product in the facility is assumed to be the location of the customer. A desired destination is calculated based on the distance to other items on the shopping list.

INDEPENDENT CLAIMS are included for the method of personal shopping, a mobile terminal and a customer identification card for use with the personal shopping system.

USE - For use as an electronic personal shopping system in a retail facility.

ADVANTAGE - The system aids a shopper by providing the location of the nearest item on the shopping list. All **scanned items** can be used to create a recent shopping history that creates a recommended replenishment list to further help the customer.

DESCRIPTION OF DRAWING(S) - The drawing shows a simplified block diagram of the personal shopping system.

Abstract (Basic): JP 10241050 A

The scanning system (B) includes several hand held scanners (A1-An) using which visitor reads barcode of purchased goods. The hand held scanner is also equipped with usage prohibition unit. The hand held scanner switches to the usage prohibition mode, when specific code entered by the user is not already registered.

Then, a warning unit does not emit a warning signal when the hand held is in the usage prohibition mode. The warning unit emits warning signal only in the usage mode, after account settlement completion.

USE - For **scanning barcode** of purchased goods.

ADVANTAGE - Facilitates to confirm location of hand held scanner. Improves management efficiency of **store**. Prevents emission of warning signal from hand held scanner, when visitor does not finish account settlement. Uses hand held scanner that makes use of charging type battery.

Abstract (Basic): GB 2317479 A

The SET history control apparatus includes a system control computer. A bar code printer for issuing product identification information and a SET number in bar code form, according to information received from the system control computer, for attachment to a product in a production line. Failure code books contain failure codes in bar code form. Each failure code corresponds to a particular type of failure which can occur in the production process.

Bar code scanners scan the product identification information and SET number from the bar code attached to a product and a failure code from a failure code book when a failure occurs. The scanned information is passed to the system control computer. The system control computer is adapted to analyse the scanned information and to **store** history information by SET in a memory concerning the assembly, checking and despatching processes of each SET.

ADVANTAGE - Improves product quality. Prevents repetitive occurrences of same failure and sending-out of same SET failure history even after another same defect is sent out.

US 5894119	A			G06F-017/00	

Abstract (Basic): EP 817139 A

The apparatus comprises a bar code reader. A transceiver receives product information from the bar code reader and transmits it to a remote location and receives back music samples. An audio output receives the music samples and provides them to a listener.

The apparatus is in the shape of a pen and the bar code reader is the point of the pen. The transceiver is an infrared transmitter receiver. A selector switch is connected to the transmitter receiver to signal a request for a different sample.

ADVANTAGE - Original album remains shrink-wrapped and user need not move from where he or she is browsing. User would no longer need to be serious about particular album before deciding review it. Increases sales of lesser known groups and albums.

Abstract (Basic): EP 652535 A

The inventory system scans the label attached to the goods at the distribution warehouse via a hand-held reader (30), to transfer the scanned data to a transportable data memory (D), which is inserted in the processor (50) at the sales point. The goods labels are scanned at the sales point and the scanned data is printed out together with data provided from the data memory, to provide an inventory list (71) and a sales ticket (81) for the customer.

Pref. the transportable memory is provided as a memory disc, the **scanned goods** codes stored alongside goods specification data, arranged in groups containing similar types of goods.

USE/ADVANTAGE - For allowing small **store** or shop to determine type and quantity of goods being sold.

Abstract (Basic): US 5192854 A

The system handles coupons selected by a customer. The coupons have

a product code of the product covered by the coupon and have a corresponding coupon code representing information relating to the value of the coupon. A coupon scanner used by the customer scans the coupons and has a memory for storing data representing the **scanned product** codes and their corresponding coupon codes. A product scanner at a retail **store scans product** codes of products to be purchased and provides data representing the scanned codes.

A processor credits to the customer the value of the coupon when the data representing the scanned codes corresponds to the data in the coupon scanner memory. The system may also include a kiosk having a processor interfacing with the coupon scanner for providing to the scanner additional data and for providing to the kiosk information stored in the coupon scanner.

ADVANTAGE - Convenient to use and reduces handling of coupon.

Abstract (Basic): US 4656591 A

The apparatus includes a scanner for registering the characterisation of each item supplied to the apparatus. A labeler applies customer-related data to at least some of the supplied items and an allocator is jointly responsive to the scanner and the order recorder for allocating each **scanned item** to one of the orders, if any, among those orders for which there is a stored requirement for the same variety of item as the **scanned item**. The allocator comprises a device for selecting one of the orders, if any, having such stored requirement.

A unit controls the labeler to label each item whose registered characterisation corresponds to a stored requirement in the selected order with customer-related data in accordance with the selected order. An accounting device limits the allocation of items scanned by the

Abstract (Basic): WO 200197105 A2

NOVELTY - A barcode scanner (21) connected to a mobile telephone (20), scans a barcode (11) for identifying the product to be ordered. The mobile telephone has a processor programmed to operate a wireless applications protocol (WAP) client, send connection less short messages or voice and dial tones received from the scanner.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) A mobile commerce system;
- (b) A printed medium carrying a barcode suitable for use with the mobile commerce terminal

USE - For ordering goods, **downloaded** products such as MP3 music file, services such as car wash and for obtaining information through Internet.

ADVANTAGE - Enables the user to place an order easily by using the barcode scanner.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the mobile commerce system.

Abstract (Basic): EP 676708 A

The information loading system includes one data base which contains item information. A second data base contains identification information for each of several shelf displays. A computer terminal matches the item information to the identification information. The two data bases are at different locations.

One computer terminal **down - loads** the item information and passes it to a second terminal where it is matched to identification information. A hand held scanner is used for **scanning items** so as to obtain item information for storage in the data base.

USE/ADVANTAGE - In shelf display and in conjunction with bar code reader. Allows simple variation of prices and easy initialisation of shelf displays.

Abstract (Basic): KR 2004025232 A

NOVELTY - A financial business service using a mobile communication terminal is provided to scan 1D(Dimension) or 2D barcode on a mono or a color screen in **order** to reduce security risk and **process** a high price settlement with the mobile communication terminal.

DETAILED DESCRIPTION - A user requests an electronic settlement service using the mobile communication terminal(110). A mobile communication company confirms user certification and member shop(120). The mobile communication company generates/transmits the encrypted 2D barcode of the information for the electronic settlement to the mobile communication terminal(130). The barcode displayed on the mobile communication terminal is inputted through a barcode scanner of the member store(140). The price settlement, a credit loan, and a cash service are provided to the user by using the **scanned barcode** (150). The user inquires the transaction particulars, and the mobile communication company sends the use particulars and a bill(160).

Abstract (Basic): WO 200317058 A2

NOVELTY - System comprises a server accessing a database storing lens product information, the products having packages with readable indices. A device at each location scans the indices dispensed to customers to obtain inventory tracking information and this is passed to the server. A tracking mechanism updates the quantities of lens products. An order entry infrastructure provides lens product ordering and fulfilment functions for the various locations.

DETAILED DESCRIPTION - There are INDEPENDENT CLAIMS for:

(1) A method of dynamically tracking an inventory of lens products
 (2) A computer program for dynamically tracking an inventory of lens products

USE - System is for simplifying the tracking and control of contact lenses maintained in an inventory at the office of an eyecare professional, and automating the lens product **ordering process**.

ADVANTAGE - System streamlines the customer service **order entry process** by automatically generating **orders**, gives a low inventory warning, optimises inventory levels, uses a handheld PDA to **scan barcodes** and interfaces with existing telecommunications infrastructures.

DESCRIPTION OF DRAWING(S) - The figure shows a system architecture underlying the dynamic inventory and tracking and management system.
